If you're looking to create a more data-informed organization — and who isn't today? AutoPowerBI Sales Analysis solutions are exclusively designed for our industry and to help you track sales and profitability performance across all sales reps, customers, vendors and even individual products. Below are two examples of our most popular advanced data-insight reports.

Customer Deep Dive

The Customer Deep Dive data analysis provided in AutoPowerBI are designed to help you gain clear, detailed and insightful business views of customer sales data.

You are limited using conventional reports to see customer sales related to vendors and the parts your customers are purchasing. It is almost impossible to track daily gross margins and drill through to specific violations by invoice number, sales rep and customer. It would take hours, if not days, for staff to compare this important data to prior years and months. The Customer Deep Dive

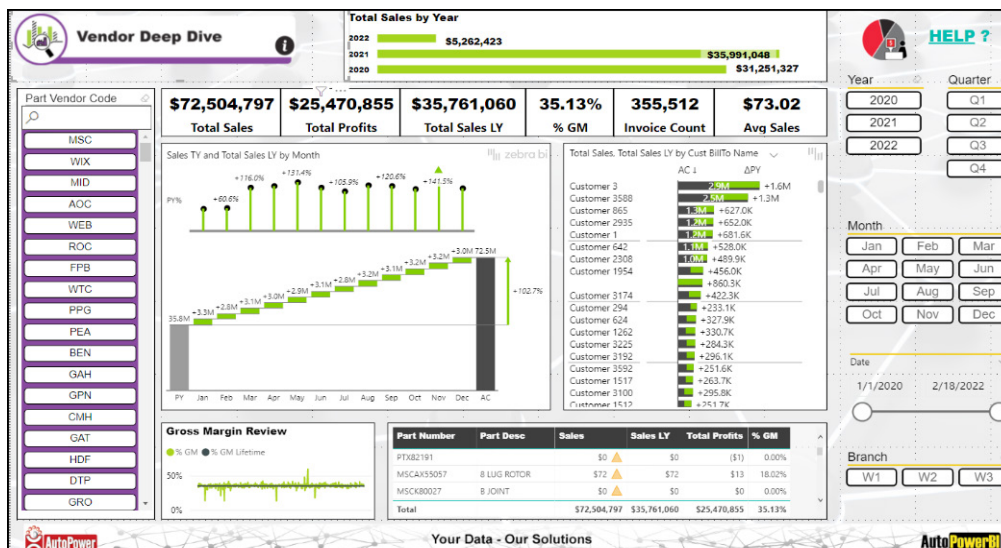

report provides all that and more in seconds.

Vendor Deep Dive

The Vendor Deep Dive data analysis is designed to help you gain extremely clear, detailed and insightful business views of product line sales data.

Special attention and a great deal of effort has been invested into making the process of drilling into even the most complex answers a straight forward, extremely fast and easy experience. All in a single AutoPower business intelligence report.
